An Introduction to
THE CUMULATIVE SUBJECT AND AUTHOR INDEX FOR
Volumes 40–51, 1988–1993 of
SOLAR ENERGY

The Journal of the
International Solar Energy Society®

Note: This Author and Subject Index to Volumes 1–51 of *Solar Energy* will also be available on disk for MS/DOS microcomputers. For further information on the disk versions or availability via ftp on the Internet, contact the *Solar Energy* Editorial Office in Waterloo, Canada. For additional copies of this issue, contact Elsevier Science, Inc.

The last cumulative index to *SOLAR ENERGY* was published in Volume 40 in 1988, and covered Volumes 1–39. These indexes cover all of the papers in Volumes 40–51, from 1988 to 1993.

The keywords used are the same as those used in Volume 40. For the user's convenience, the keywords and cross references are shown in Table 1. The numbered items are those used as keywords. The items not numbered are cross references.

Each paper has been assigned up to three keywords (which are identified by numbers). Most of the keyword assignments were made by the authors.*

Several approaches to the development of the keyword list were possible. The easiest would have been to use a small number of keywords resulting in many entries under each keyword. Or, a large number of keywords would result in an index containing more information, but more difficult to assemble and use. The final list developed is between the extremes. It is designed to include enough keywords to provide a useful level of detail, but should not require excessive searches through many subjects to find the references on general topics. To make use of the index easier (and also to help in its preparation), categories of keywords have been developed. For example, a category for "Flat Plate Collectors" includes the keywords that are most likely to lead the user on papers on various aspects of flat plate collectors. A list of fifteen of these categories is shown in Table 2. Tables 3a to 3o list the keywords for the various categories; these provide a convenient way to find the range of references dealing with these subject areas in the broader field of solar energy.

There are entries that appear on more than one of the category lists. This is evidence of one of the problems in preparation of the index, i.e., how the overlaps of subject areas should be handled. An obvious example of this problem is in collectors. It is often clear that a paper deals primarily with either performance or theory, but in a sense any paper on theory deals with performance. In many cases it has been possible to distinguish between flat plate, CPC, and concentrating collectors, but theory of one often applies to the others.

The listings under "CPC" cover a wide range of non-imaging collectors, and are not limited to those that are parabolic.

Active and passive systems provide other examples; design methods can apply to both, and the "Design Method" category includes references to papers on both active and passive systems.

In cases where there were few references under a desired keyword, combinations of keywords have been used. For example, "Photobiology" and "Photosynthesis" are combined. The cross references in the keyword list are designed to make it easy to find these papers.

The user of the index will have to do some exploring if he or she is looking for references in subjects where the distinctions are not clear.

THE INDEXES

The SUBJECT INDEX shows three items for each entry.

Author. The name indicated is that of the first author. (All authors are listed in the author index.)

Volume, Page. The volume and page numbers of the paper. All page numbers are three digit numbers, e.g., 008 is page 8, and 097 is page 97.

Title. As much of the title as will fit on the line is included. The full title is shown for most papers; some are not complete.

The AUTHOR INDEX also shows three items for each entry.

Author. The last name and initials are shown. There is an entry in the index for each author of every paper.

Volume, Page. The volume and page numbers of the paper.

Keyword Numbers. The one, two, or three keyword numbers assigned to the paper are shown. These are translated into subjects in Table 1, and the numbers are indicated at the beginning of each subject category in the subject index.

ERRORS

A substantial effort has gone into compiling this index, and many checks on its accuracy have been made. We hope that there will be few errors, but there will certainly be some. There may be errors in spelling, in page or volume numbers, or keywords. There may also be disagreements about assignments of keywords to papers. The Editorial Office would appreciate learning of any errors.

J. A. Duffie
Madison, WI, USA
December 1994

*Assistance in assigning keywords has been provided by Prof. Jane Davidson at the University of Minnesota, and by the staff of the Solar Energy Laboratory of the University of Wisconsin. Laurie Sheahan has assembled the indexes in a most skillful manner.

Table 1. Keywords

	Absorptance and Emittance—see Selective Surface	4380	Drying
	Absorption Cooling—see Cooling, Absorption	4390	Duration of Sunshine—see Cloud Cover
4010	Active System Designs		Economics
	Aeolian Energy—see Wind		Emittance and Absorptance—see Selective Surface
	Aging—see Performance Degradation	4400	Energy Economies
	Agriculture—see Biomass, Plant Growth, Drying	4410	Engines
	Air Conditioning—see Cooling		Eolian Energy—see Wind
4020	Air Heater		Evacuated Collector—see Collector, Evacuated
	Albedo—see Ground Reflectance	4420	Evaporation
4030	Angles, Solar		Extraterrestrial Radiation—see Solar Constant
4040	Architecture		Flat Plate Collector—see Collector, Flat Plate
4050	Atmospheric Transmittance		Flourescence—see Photochemistry
4060	Beam and Diffuse Radiation		Focussing Collector—see Collector, Concentrating
4070	Biomass		Freeze Protection
4080	Building Heating and Cooling	4430	Furnace, Solar
4090	Building Heating, Active	4440	Gasification—see Pyrolysis and Gasification
4100	Building Heating, Active, Performance		General Topics—see Reviews
4110	Building Heating, Design		Geometry, Solar—see Angles, Solar
4120	Building Heating, Passive		Glazing—see also Transmittance
4130	Building Heating, Passive, Performance	4450	Global-Diffuse Radiation—see Beam and Diffuse Radiation
	Buildings, Solar—see 52(1)		Greenhouse and Sunspace
	Cells, Solar—see Photovoltaic		Ground Reflectance
4140	Central Receiver Systems	4460	Ground Temperature—see Soil Temperature
	Chemical Heat Pumps—see Heat Pump Systems	4470	Heat Pump System
	Chemical Storage—see Storage, Chemical		Heat Transfer—see Central Receiver systems; Collector
	Circumsolar Radiation—see Beam and Diffuse Radiation	4480	Heating of Building—see Building Heating, Active or Passive
	Climatic Data—see Radiation Data		Heating or Cooling Loads
4150	Cloud Cover and Sunshine Duration		Heating, Swimming Pool—see Swimming Pool Heating
4160	Collector Testing	4490	Hybrid Heating Systems
4170	Collector, Concentrating		Hydrogen Production
4180	Collector, CPC		Imaging Furnace—see Furnace, Solar
4190	Collector, Design		Industrial Process Heat
4200	Collector, Evacuated	4500	Insulation, Transparent—see Collector, Thermal
4210	Collector, Flat Plate	4510	Losses; Glazing; Transmittance. See 49(5)
4220	Collector, Flat Plate, Reflector Augmented		Integral Collector Storage DHW—see Thermosyphon Systems
4230	Collector, Orientation	4520	Integrated Energy Systems
4240	Collector, Performance		Legal Aspects
4250	Collector, Theory, Concentrator		Long-Time Performance—see Performance Degradation
4260	Collector, Theory, CPC		Ocean Thermal Energy
4270	Collector, Theory, Flat Plate		Orientation, Collector—see Collector, Orientation
4280	Collector, Thermal Losses	4530	Packed Bed Storage—see Storage, Packed Bed
	Collector, Tracking—see Collector, Concentrating	4540	Passive Heating of Building—see Building Heating, Passive
	Collector-Storage Wall—see Passive, Trombe Wall	4550	Passive System Design
	Concentrating Collector—see Collector, Concentrating		Passive Water Heater—see Water Heating, Passive
4290	Controls		Passive, Collector Storage Wall—see Passive, Trombe Wall
4300	Cooking		Passive, Direct Gain
	Cooling Loads—see Heating or Cooling Loads		Passive, Sunspace—see Greenhouse and Sunspace
4310	Cooling, Absorption	4560	Passive, Trombe Wall and Roof Pond
4320	Cooling, Desiccant		Pebble Bed Storage—see Storage, Packed Bed
4330	Cooling, Mechanical-Solar	4590	Performance Degradation
4340	Cooling, Passive		Performance Predictions, Systems—see Design Methods, Systems
	Cooling, Radiative—see Radiative Cooling		Phase Change Storage—see Storage, Phase Change
4350	Cooling, Thermoelectric	4570	Photobiology and Photosynthesis
	Corrosion—see Performance Degradation		Photochemistry and Fluorescence
	Cover—see Glazing		Photoelectrochemistry
	CPC Collector—see Collector, CPC	4580	Photosynthesis—see Photobiology and Photosynthesis
	Daylighting—see Building Heating, Passive		
	Desiccant Cooling—see Cooling, Desiccant	4590	
	Design—see component, system or application		
4360	Design Method, Systems		
	Deterioration—see Performance Degradation		
	Diffuse Radiation—see Beam and Diffuse Radiation	4600	
	Direct-Diffuse Radiation—see Beam and Diffuse Radiation	4610	
	Direct Gain Passive—see Passive, Direct Gain	4620	
4370	Distillation and Water Purification

SUBJECT CATEGORIES

There are subject categories of keywords that are closely related. Table 2 lists categories that have been useful in assigning keywords. Tables 3a–3o show these lists and include brief explanations of some keywords that were used as guidelines by the index preparers. It is obvious that these categories overlap. They are intended to serve as useful guidelines to the user of the index in finding appropriate references.

Table 2. SUBJECT CATEGORIES

3a	Biological Processes
3b	Concentrating Collectors
3c	CPC Collectors
3d	Design
3e	Direct Conversion (other than Photovoltaic)
3f	Flat Plate Collectors
3g	Photovoltaics
3h	Radiation Measurements and Data
3i	Space Heating, Active
3j	Space Heating, Passive
3k	Storage
3l	Systems
3m	Water Heating, Active
3n	Water Heating, Passive
3o	Wind

Table 3a. BIOLOGICAL PROCESSES

4070	Biomass
4600	Photobiology and Photosynthesis
4670	Plant Growth
4700	Pyrolysis and Gasification

This category includes the use of solar energy in growth of plants to form biomass and the processing of biomass by pyrolysis, gasification, or other means to make fuels.

Table 3b. CONCENTRATING COLLECTORS

4140	Central Receiver Systems
4170	Collector, Concentrating
4180	Collector, CPC
4190	Collector, Design
4220	Collector, Flat Plate, Reflector Augmented
4230	Collector, Orientation
4240	Collector, Performance
4250	Collector, Theory, Concentrator
4260	Collector, Theory, CPC
4280	Collector, Thermal Losses
4430	Freeze Protection
4440	Furnace, Solar
4590	Performance Degradation
4880	Specular Reflection

This category includes papers that deal with various aspects of collectors that use optical systems to increase the level of radiation on a receiver.

Central Receiver Systems—Any aspects of central receiver (power tower) systems, including heliostat field, receiver, losses, shading storage, performance, etc.

Collector, Concentrating—A general category for papers on configurations and other aspects of concentrators that do not fit under other keywords.

Collector, CPC—Non-imaging collectors of the general type described as CPC, whether or not they are actually parabolic. Includes theory, design, orientation, performance, etc.

Collector, Design—Thermal or mechanical design of collectors.

Collector Performance—Data or calculations.

Collector, Theory, Concentrator—Theory of optical or thermal performance of non-imaging collectors.

Collector, Theory, CPC—Theory of optical or thermal performance of non-imaging collectors.

Collector, Thermal Losses—Theory or measurements of thermal losses from collectors.

Freeze Protection—Design, controls, or other means for avoiding freeze damage.

Furnaces, Solar—Imaging furnaces using solar (or other) radiation source, usually for materials or chemical research.

Performance Degradation—Performance loss with time due to deterioration of materials, etc.

Specular Reflection—The material property (reflectance).

Table 3c. CPC COLLECTORS

4260	Collector, CPC
4190	Collector, Design
4200	Collector, Evacuated
4230	Collector, Orientation
4240	Collector, Performance
4260	Collector, Theory, CPC
4280	Collector, Thermal Losses
4590	Performance Degradation

This category includes papers that deal with non-imaging concentrators generally described as CPC (compound parabolic concentrators) whether or not they are parabolic. Because most of these collectors use evacuated tube receivers, many papers on them will be listed under 1320 and 1340.

Collectors, CPC—Non-imaging collectors of the CPC type. Includes theory, design, orientation, performance, etc.

Collector, Design—Thermal or mechanical design of collectors.

Collector, Orientation—Effects of orientation on design and performance.

Collector, Performance—Data or calculations.

Collector, Theory, CPC—Theory of optical or thermal performance.

Collector, Thermal Losses—Theory or measurements of thermal losses from collectors.

Performance Degradation—Performance loss with time due to deterioration of materials, etc.

Table 3d. DESIGN

4010	Active System Design
4110	Building Heating, Design
4190	Collector, Design
4360	Design Method, Systems
4390	Economics
4560	Passive System Design
4650	Photovoltaic System Simulation, Design, Applications
4820	Simulation of System Performance
5060	Water Heating, Design

This category covers both methods for designing components and systems, and information about specific designs.

Active System Design—Designs of space heating, water heating, or other applications of active systems.

Building Heating, Design—Designs of active building heating systems.

Collector, Design—Designs of flat plate or other collectors.

Design Method, Systems—Methods such as f-chart, SEU, or others for estimating annual performance and design of active or passive systems.

Economics—Economic analysis methods and economics of specific components, systems, and applications.

Passive Systems Design—Designs of space heating, water heating, or other applications of passive processes.

Photovoltaic System Simulation, Design, Applications—Methods of design and specific system designs of photovoltaic systems.

Simulation of System Performance—Computer computation of system performance.

Water Heating, Design—Designs of water heating systems.

Table 3e. DIRECT CONVERSION (OTHER THAN PHOTOVOLTAIC)

4610	Photochemistry and Fluorescence
4620	Photoelectrochemistry
4980	Thermochemical Processes
4990	Thermoelectric and Thermionic Processes
5000	Thermophotovoltaic

This category includes papers on all processes for direct conversion from solar to electrical or chemical energy other than photovoltaic and photosynthesis.

Photochemistry and Fluorescence—Chemical reactions driven by light, and producing different chemical species (but no electrical energy) and fluorescence.

Photoelectrochemistry—Chemical reactions in cells that are light-driven and produce electrical energy.

Thermochemical Processes—Thermal decomposition of chemicals in collectors. Papers in this category may also be appropriately listed under Storage, Chemical.

Thermoelectric and Thermionic Processes—Use of thermopiles with hot junctions heated by solar energy, or thermionic generators, to produce electrical energy.

Thermophotovoltaic—Processes in which an absorber is heated by solar radiation with the absorber reradiating to photovoltaic converters.

Table 3f. FLAT PLATE COLLECTOR

4020	Air Heater
4160	Collector Testing
4190	Collector, Design
4210	Collector, Flat Plate
4220	Collector, Flat Plate, Reflector Augmented
4230	Collector, Orientation
4240	Collector, Performance
4270	Collector, Theory, Flat Plate
4280	Collector, Thermal Losses
4430	Freeze Protection
4450	Glazing
4590	Performance Degradation

This category includes papers that relate to flat plate collectors.

Air Heater—Collectors designed to heat air or other gas.

Collector Testing—Test theory, methods, and procedures.

Collector, Design—All aspects of thermal or mechanical design.

Collector, Flat Plate—A general keyword for papers on flat plate collectors that do not fit easily under other keywords.

Collector, Flat Plate, Reflector Augmented—Flat plate collectors with (usually) flat reflectors to increase incident radiation.

Collector, Orientation—Effects of orientation on design or performance.

Collector Performance—Data or calculations.

Collector, Theory, Flat Plate—Theory of optical or thermal performance.

Collector, Thermal Losses—Theory and measurements of thermal losses.

Freeze Protection—Design, control strategies, or other means to avoid freeze damage.

Glazing—Glazing materials and their properties.

Performance Degradation—Performance loss with time due to deterioration of materials, etc.

Table 3g. PHOTOVOLTAICS

4630	Photovoltaic Cell/Array/System Performance
4640	Photovoltaic Cells
4650	Photovoltaic System Simulation, Design, Applications
4660	Photovoltaic, Economics

This category includes all aspects of photovoltaic processes, devices, arrays, and applications.

Photovoltaic Cell/Array/System Performance—Performance data on cells, arrays, and applications.

Photovoltaic Cells—Theory, experiments, practice, etc., of cells and their functioning.

Photovoltaic System Simulation, Design, Applications—This category includes papers on systems for applications including simulations, designs, design procedures, and the applications.

Photovoltaic, Economics—Papers dealing with matters relating to costs and prices of cells, arrays, and applications.

Table 3h. RADIATION MEASUREMENTS AND DATA

4030	Angles, Solar
4050	Atmospheric Transmittance
4060	Beam and Diffuse Radiation
4150	Cloud Cover and Sunshine Duration
4710	Radiation and Weather Data
4720	Radiation Estimation
4730	Radiation Instrument
4740	Radiation Statistics
4750	Radiation, Spectral Distribution
4760	Radiation, Tilted Surfaces
4810	Shading and Blocking
4830	Sky Radiation
4850	Solar Constant and Extraterrestrial Radiation
4860	Solar Radiation Simulation
5030	Utilizability

This category includes papers on solar radiation measurements data, data processing, and related climatological data.

Angles, Solar—Calculations of solar position, angle of incidence, etc.

Atmospheric Transmittance—Absorption and scattering of solar radiation in the atmosphere and effects on terrestrial radiation.

Beam and Diffuse Radiation—Relationships among beam (direct), diffuse, and global radiation and calculation of radiation on tilted surfaces.

Cloud Cover and Sunshine Duration—Effects of cloud cover or hours of sunshine on solar radiation.

Radiation and Weather Data—Detailed or average solar radiation data. Also, other climatic data, including temperatures, etc.

Radiation Estimation—Methods of estimation of solar radiation from other meteorological data.

Radiation Instrument—Instruments for measurement or recording of solar radiation or its components.

Radiation Statistics—Statistics of solar radiation and related meteorological data, such persistence, cross correlations, TMYs, etc.

Radiation, Spectral Distribution—Measurements or instruments for measuring wavelength dependence of solar radiation.

Radiation, Tilted Surfaces—Measurements or calculation of radiation on surfaces other than horizontal.

Shading and Blocking—Shading or blocking of solar radiation.

Sky Radiation—Long wave radiation from the sky, and sky temperature.

Solar Constant and Extraterrestrial Radiation—Intensity and spectral distribution of radiation outside of the earth's atmosphere.

Solar Radiation Simulation—Artificial, laboratory radiation sources approximating the spectral distribution of solar radiation.

Utilizability—Hourly or daily utilizability data or methods of prediction.

Table 3i. SPACE HEATING, ACTIVE

4080	Building Heating and Cooling
4090	Building Heating, Active
4100	Building Heating, Active, Performance
4110	Building Heating, Design
4430	Freeze Protection
4480	Heat Pump Systems
4490	Heating or Cooling Loads
4500	Hybrid Heating Systems
4820	Simulation and Analysis of System Performance

This category covers papers on active space heating systems, including their design, operation, practical aspects, economics, etc. Papers on hybrid systems may also be listed under these keywords.

Building Heating and Cooling—Combined heating and cooling systems.

Building Heating, Active—All aspects of active space heating systems.

Building Heating, Active, Performance—Performance data on active systems.

Building Heating, Design—Design of active building heating systems, including design methods and specific designs.

Freeze Protection—Designs or control strategies for avoiding freeze damage.

Heat Pump Systems—Combined solar and heat pump systems, in any configuration.

Heating or Cooling Loads—Estimation of heating or cooling loads.

Hybrid Heating Systems—Combined active and passive heating.

Simulation and Analysis of System Performance—Computer computation of system performance.

Table 3j. SPACE HEATING, PASSIVE

4040	Architecture
4120	Building Heating, Passive
4130	Building Heating, Passive, Performance
4340	Cooling, Passive
4460	Greenhouse
4560	Passive System Design
4570	Passive, Direct Gain
4580	Passive, Trombe Wall
4820	Simulation and Analysis of System Performance

This category includes papers on all aspects of passive and hybrid space heating, including their design, operation, economics, etc.

Architecture—Building design and aesthetics.

Building Heating, Passive—All aspects of passive and hybrid space heating.

Building Heating, Passive, Performance—Performance data on passive heating systems.

Cooling, Passive—All aspects of passive cooling.

Greenhouse—Solar heating of glazed spaces for plant growth.

Passive System Design—Passive heating system design, including design methods and specific designs.

Passive, Direct Gain—All aspects of direct gain heating systems.

Passive, Trombe Wall—All aspects of systems with collector-storage walls (Trombe Wall or Michel Wall).

Simulation and Analysis of System Performance—Computer computation of system performance.

Table 3k. STORAGE

4560	Passive System Design
4570	Passive, Direct Gain
4580	Passive, Trombe Wall and Roof Pond
4680	Pond, Solar
4890	Storage, Chemical
4900	Storage, Packed Bed
4910	Storage, Phase Change
4920	Storage, Seasonal
4930	Storage, Sensible
4940	Storage, Stratification

This category includes all aspects of energy storage, including systems in which storage is either an integral and unidentifiable part (i.e., passive) or a clearly identifiable part (i.e., active storage units).

Passive System Design—Designs of space heating, water heating, or other applications of passive processes.

Passive, Direct Gain—All aspects of direct gain systems.

Passive, Trombe Wall and Roof Pond—All aspects of systems with collector-storage walls (Trombe Walls or Michel Walls), including water walls and roof ponds.

Pond, Solar—Salt gradient or membrane stabilized solar ponds.

Storage, Chemical—Energy storage in the form of chemical energy, e.g., in storage battery or a dissociated chemical compound.

Storage, Packed Bed—Energy storage in particulates through which a heat transfer medium flows (e.g., rock bed, pebble bed, packed bed, etc.).

Storage, Phase Change—Energy storage by latent heat of a phase change (e.g., ice-water or sodium sulfate decahydrate).

Storage, Seasonal—Long-time storage (summer–winter) by any means (sensible heat in water or ground, phase change, etc.).

Storage, Sensible—A general keyword for papers on sensible storage that do not fit easily under other keywords.

Storage, Stratification—Temperature gradients in storage.

Table 3l. SYSTEMS

4290	Controls
4360	Design Method, Systems
4480	Heat Pump System
4590	Performance Degradation
4820	Simulation and Analysis of System Performance
4960	System Testing

This category covers papers that deal with system considerations (as opposed to components). The systems can be active or passive, and can be for any application.

Controls—Control theory, strategies, equipment, applications, etc.

Design Methods, Systems—Methods such as f-chart, SEU, and others for estimating annual performance and design of active or passive systems.

Heat Pump Systems—Combinations of solar collectors and heat pumps, in series, parallel, or other configurations.

Performance Degradation—Performance loss with time due to deterioration of materials, etc.

Simulation and Analysis of System Performance—Computer computation of system performance.

System Testing—Methods, results, etc. of system performance tests.

Table 3m. WATER HEATING, ACTIVE

4430	Freeze Protection
4820	Simulation and Analysis of System Performance
5040	Water Heating, Active
5050	Water Heating, Active, Performance
5060	Water Heating, Design

This category covers papers on active water heating systems, including their design, operation, economics, etc. Combined space and water heating systems may also be appropriate for listing under this category.

Freeze Protection—Design or control strategies or other means of avoiding freeze damage.

Simulation and Analysis of System Performance—Computer computation of system performance.

Water Heating, Active—All aspects of active water heating systems.

Water Heating, Active, Performance—Performance data on active water heaters.

Water Heating, Design—Water heating designs and design methods.

Table 3n. WATER HEATING, PASSIVE

4430	Freeze Protection
5010	Thermosyphon System
5060	Water Heating, Design
5070	Water Heating, Passive, Performance

This category includes papers on passive water heaters, including thermosyphon, integral collector-store, and others.

Freeze Protection—Design, control strategies, and other means of avoiding freeze damage.

Thermosyphon System—Natural circulation systems for water heating (or space heating), including those with separate collector and storage tanks and with close coupled collector and tank. All types of passive water heating systems.

Water Heating, Design—Design methods for water heating systems.

Water Heating, Passive, Performance—Performance data on passive water heaters.

Table 3o. WIND

5080	Wind
5090	Wind Systems, Applications, Economics
5100	Wind, Dynamics
5110	Wind, Hybrid Applications
5120	Wind, Resource Assessment
5130	Wind, Turbines
5140	Wind, Utility Interface

This category includes all papers on wind machines, applications, resources, designs, combinations with other resources, etc.

Wind—A general category used only if a paper needs to be listed under this general heading and none of the subjects listed below are appropriate.

Wind Systems, Applications, Economics—Systems and applications of wind machines and their economics.

Wind, Dynamics—Papers on turbulence, wakes, and the dynamics associated with wind as an input to turbines.

Wind, Hybrid Applications—Combinations of wind systems with solar, diesel, and other energy sources.

Wind, Resource Assessment—Data and analysis of wind speed, wind energy, etc.

Wind, Turbines—Information on wind turbines, their theory, design, performance, etc.

Wind, Utility Interface—Use of wind-generated energy by utilities.
